

CATEGORY: GOVERNMENT/MUNICIPAL

GMIA FIRE & RESCUE STATIONS

Cornerstone performed the redesign and construction of a major renovation of both Fire and Rescue stations located on the grounds of Milwaukee Mitchell International Airport. The work done included new water mains, all new connections to existing sanitary and storm sewers as well as complete reconstruction of bathrooms, kitchens and laundry facilities. CornerStone employed Building Information Management technology by coordinating all construction modeling through Revit and significantly reduced costs by pre-fabrication of both interior and site utility assemblies.
